

Customer information

Automation of the taper roll change with an integrated autosplicer!

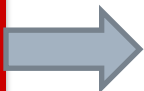

The integrated autosplicer for taper is an interesting option for every customer who uses a SENNING-Taper.

Work facilitation for the operator

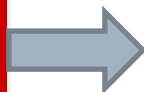

The integrated autosplicer for taper automatically splices the rolls at full speed. The operator can prepare the reel splice when he has time and can work more flexible and time saving.

Higher production reliability

Operating errors are ruled out by the automation of the taper roll change, production reliability is increased and thus, efficiency.

Fast amortisation

Due to the low investment volume, the purchase of an integrated autosplicer for the tap change quickly pays for itself.
